

Coding for variables in the analysis dataset

Environment and Wellbeing Web Questionnaire, Part C

YOUR FAMILY AND FRIENDS

Text shown in a red font (variable names, response value codes) provide information about item coding in the 16 year analysis dataset.

In the dataset, all items from this questionnaire are double entered: the dataset contains one row of data per twin, with both twin and co-twin data in each row. All variables with names ending in '1' refer to the twin identified in a given row of data (regardless of whether this is the elder or younger twins). Those variables with names ending in '2' refer to the co-twin. Hence in this document all variable names are shown ending in '1/2' because each variable is present for both twin and co-twin.

Value codes shown in a blue font show the coding used in the raw data, on the web server and in the raw analysis files, where this coding differs from the coding used in the final analysis dataset. Where the coding does not differ, the value codes are shown in red only.

Text shown in this pink/purple font (screen numbers, validation rules) are for information only: these pieces of text were not shown on screen for twins. The other sections of text, in a black font, are exactly as shown on screen.

As this questionnaire was delivered as a web activity, not as a paper booklet, the formatting shown in this document differs from the formatting of the questionnaire on screen. However, the text of the questions and responses is unchanged.
